Introduction

Hamilton Township, located in Mercer County, New Jersey, owns and operates about 7,244 stormwater catch basins that drain into waterways throughout the township. This is a summary of the catch basin inspection program conducted in 2023 by the Rutgers Cooperative Extension (RCE) Water Resources Program. The purpose of the program is to provide an assessment of existing conditions related to obstruction of flow within the catch basin box due to sediment or debris accumulation atop the grate as well as identifying catch basins in need of repair. This assessment evaluates the overall integrity of the catch basin structures by prioritizing maintenance for each catch basin in terms of cleaning, repairs, and overall needs.

All catch basins that are "owned and operated" by Hamilton Township per the municipal separate storm sewer system (MS4) permit from the New Jersey Department of Environmental Protection (NJDEP) are required to be inspected once every five years. Moving forward, one of five inspection zones will be inspected each year. The township had existing Snow Zones which were used to divide inspections each year as evenly as possible. Inspection Zone 1 includes the southwest portion of the township (Snow Zone A & B). The RCE Water Resources Program, was responsible for inspecting Snow Zone B over the summer of 2023, while the Hamilton Department of Public Works (DPW) was responsible for inspecting Snow Zone A.

All efforts for this project were for the purposes of inspecting catch basins to maintain their function to ensure proper drainage and to prevent clogging and flooding. The assessments were performed from June to July 2023 by the RCE Water Resources Program.

Methods and Procedures

A multi-part approach was taken to assess catch basins that are owned or operated by Hamilton Township. A geographic information system (GIS) was used to visualize the location of mapped catch basin locations using existing data. Hamilton Township utilizes the web-based GIS application TRAISR to manage their digital stormwater assets, so a digital inspection form was created inside TRAISR for ease of entry and to allow seamless collaboration between the RCE Water Resources Program and Hamilton Township. Inspection personnel created work orders for each catch basin that was inspected.

1

The software allowed staff to photograph and record data for each stormwater catch basin assessed. This collected data included information about the properties of the catch basin (e.g., depth, grate dimensions, box material, inlet diameters, etc.) as well as needs for maintenance or repair of catch basin structures. These collected data were processed and standardized as needed for consistency across the dataset. These data were analyzed and visualized using ArcGIS Pro.

A total of 1,099 catch basins were originally identified for assessment in 2023 in Snow Zone B. This is out of 7,244 township-owned or operated stormwater catch basins, including catch basins in the right of way, on municipally owned property, and in stormwater related easements. Of the 1,099 catch basins that were to be inspected, 988 were successfully inspected, 33 were reported not to exist, 30 were identified as duplicates within TRAISR, two (2) were identified as trash grates for conveyance structures, and 46 were not found or were otherwise inaccessible. Twenty of these were in or near the DPW yard and left for the DPW to inspect. Except the 20 remaining catch basins to inspect, the DPW should evaluate these closely to determine if they can be accessed for inspection or if they should be removed from the database. Attachment 2 summarizes the notes recorded during site inspections for the catch basins not found and/or inaccessible.

A prioritization scale was utilized to compare cleaning, repair, and overall priority. Higher overall priority was assigned to catch basins that exhibited significant signs of deterioration than to those that exhibited signs of obstructed flow that only impaired their capacity to handle stormwater inundation. All catch basins were placed on a scale from one (1) to five (5), with one (1) indicating no maintenance necessary and five (5) being the highest priority and needing immediate attention. Any catch basin assigned a priority level of three (3) or higher should be addressed for maintenance or for repair.

Summary of Key Findings

The following conclusions were drawn after reviewing data for the 988 catch basins assessed. Table 1 summarizes these findings. Based on medium being the action level, 164 catch basins are in need of cleaning, and 16 are in need of repair. For overall priority, a greater weight was given to repair, so there are 158 catch basins that are in need of attention first.

Table 1: Count of Zone B catch basins in each cleaning, repair, and overall priority tier

	(1)-None	(2)-Low	(3)-Medium	(4)-High	(5)-Highest
Cleaning Priority	307	517	120	31	13
Repair Priority	875	97	13	3	0
Overall Priority	303	527	112	37	9

A series of maps is shown in Attachment 1 to show the spatial distribution of the priority criteria. A series of tables is provided in Attachment 2 to highlight each priority criterion as well as identify catch basins that could not be found or should be removed from the dataset. The full dataset with images of each catch basin can be viewed through the TRAISR application. The TRAISR dataset can be filtered and sorted with these criteria to navigate the data more easily than the static tables.

Recommendations

Based on the assessment and summary of key findings, recommendations are as follows:

1. The nine (9) catch basins identified as highest overall priority should be visited by Hamilton Township personnel, followed by the 37 high priority catch basins. A plan and schedule should be developed to take the necessary corrective actions as soon as possible.

2. A complete maintenance plan and schedule should be developed for all stormwater catch basins in Region 1 to address the deficiencies noted in this assessment in a timely manner starting with those with highest priority.

3. Each year, subsequent Regions should be inspected (Region 2 in 2024, Region 3 in 2025, etc.).

This assessment was not intended to be a complete and comprehensive inventory of all catch basins owned and operated by Hamilton Township. Efforts for this project focused solely on mapping and inventorying known municipally maintained catch basins located in Snow Zone B. The remaining inspections in Inspection Zone 1 should be completed by the DPW to fulfill the required assessments for this year.
