Rain Barrel Workshop Application Form

Name:
Address:
E-mail Address:
Phone Number:
Number of people attending:
Number of barrels requesting ($20 each).

The goal of this workshop is to help homeowners reduce stormwater runoff and conserve water. Rain barrels require minimal maintenance once or twice a year to keep functioning properly year after year. Rutgers representatives will make a check-up visit to ensure each rain barrel is being properly maintained and utilized. You will be instructed in how to set the rain barrel up at home, how to monitor rainfall levels and be given educational materials produced by Rutgers University geared towards educating others.

Timeline
July: Attend the workshop and install the barrel at home.
August: Meet with a Rutgers representative to perform follow-up visits to monitor progress and perform troubleshooting on rain barrel use.
September: Return the post-workshop survey to evaluate progress and satisfaction with the education.
November: All rainfall data will be due to Rutgers Cooperative Extension for processing.

I agree to:

1. Take the before and after tests given at the workshop.
2. Record the amount of water my rain barrel collects until December 31, 2010.
3. Properly maintain my rain barrel until at least December 31, 2010.
4. Share the information I have learned at this workshop with at least one other person this summer by giving them the fact sheets received at the workshop.
